

Save the Internet Act of 2019

In 2015, the Federal Communications Commission (FCC) adopted the Open Internet Order to protect Internet users from ISPs throttling traffic, censoring content, and imposing unfair fees. But just a few years later, a new chairman of the FCC killed net neutrality by repealing the Open Internet order. Since then, cable companies like Comcast, AT&T, and Sprint have been rolling out Internet fast lanes and slowing down data being used by competitors' services.

Americans want net neutrality, and we've demanded that our lawmakers pass strong legislation to protect our digital rights. The FCC's leadership can be changed with every election cycle, and recent history has proven that we can't count on these unelected bureaucrats to consistently defend our online freedoms.

The Save the Internet Act of 2019 is a simple, three-page bill that would restore the Open Internet Order by rolling back the FCC's disastrous decision to destroy net neutrality. If this bill passes the House and the Senate, it will enshrine net neutrality into law. Plain and simple.
